What is it?

- ABA Children's Services, also referred to as BHRS, is a high-intensity treatment program that takes place in the home, school and community.
- The services use intervention methods based on Applied Behavior Analysis (ABA). ABA is a discipline devoted to the understanding and improvement of human behavior. ABA provides structured programming to increase appropriate behaviors, decrease problematic behaviors and increase skills. Data is collected and analyzed to ensure treatment is effective.

What will occur during the course of treatment?

- Treatment starts with the completion of a Functional Behavioral Assessment (FBA). An FBA is completed to gather information on the individual's behaviors and skills in order to make recommendations for treatment.
- Based on the results of the FBA, a treatment plan and crisis intervention plan are developed and implemented.
- Training and continuous collaboration with the client, family and treatment team will occur throughout services.

Who is involved in treatment?

- Parents/Caregivers, who are a vital part of the treatment team
- A Behavior Analyst (BA); a clinician who is a Board Certified Behavior Analyst (BCBA); a Behavior Consultant (BC); a licensed, master's level clinician; and at times a Behavior Technician (BT) who is a bachelor's level clinician
- All other professionals or natural supports who are involved in the client's care
